Using Google Firebase Services

Spark plan

Snippy-cb — Firebase CLI — firebase ‹ firebase init — 80×24

e we get started, keep in mind:

ou are initializing in an existing Firebase project directory

ch Firebase CLI features do you want to set up for this folder? Press
elect features, then Enter to confirm your choices. Hosting: Configure
y Firebase Hosting sites

roject Setup

, let's associate this project directory with a Firebase project.
an create multiple project aliases by running **firebase use --add**,
or now we'll just set up a default project.

irebaserc already has a default project, using snippy-c2b49.

osting Setup

public directory is the folder (relative to your project directory) th
contain Hosting assets to be uploaded with **firebase deploy**. If you
build process for your assets, use your build's output directory.

t do you want to use as your public directory? (public)

total)
